SUMMARY

Software Engineer with a strong foundation in data structures, algorithms, and problem-solving, reflected by solving 250+ problems on LeetCode. Experienced in building full-stack, scalable web applications and REST APIs using Java, JavaScript, Node.js, Express, MongoDB, and MySQL. A collaborative engineer with a strong sense of ownership, dedicated to writing understandable, maintainable, and reusable software.

TECHNICAL SKILLS

Programming Languages: Java (Data Structures & Algorithms), Python, C++ (Basics), JavaScript

Frontend Development: React, HTML, CSS, JavaScript, EJS

Backend Development: Node.js, Express.js, REST APIs, MySQL, MongoDB

EDUCATION

Pandit Deendayal Energy University, Gandhinagar

Sep 2022 – Jun 2026

Bachelor of Technology in Information and Communication Technology

EXPERIENCE

ESPM Sense Private Limited

Jun 2025 – Jul 2025

Frontend Intern

- Developed and customized interactive IoT dashboards in ThingsBoard, enabling real-time visualization of sensor data for performance tracking and internal system monitoring.
- Designed and implemented client-side and server-side scripts in ERPNext to automate employee daily work report submissions, improving reporting efficiency and data accuracy.
- Integrated ERPNext with Bitrix24 using REST APIs to synchronize project tasks and send instant notifications, enhancing team communication and overall workflow coordination.

ACADEMIC PROJECTS

GoTogether – Carpooling Web Application | *MongoDB, Express, Node.js, JavaScript, EJS*

🐙 GitHub

- Developed a full-stack, scalable carpooling platform with secure user authentication, where users select source, destination, and role (driver or rider) for shared rides.
- Designed a geolocation-matching algorithm using the Google Maps API to convert user-entered locations into coordinates and identify nearby complementary users within a 1 km radius.
- Built a real-time matching and notification system enabling users to accept or reject ride requests before starting a trip.
- Implemented WebSocket-based live location sharing for continuous, real-time position updates between matched users, improving the reliability of the tracking experience.

Wanderlust – Hotel Finder Web App | *Node.js, Express, MongoDB, JavaScript, EJS*

🐙 GitHub

- Built a full-stack hotel discovery web application with maintainable, modular code, enabling users to explore hotels by price, amenities, and location.
- Integrated the Google Maps API for location-based hotel exploration and enhanced navigation experience.
- Implemented user authentication and authorization for secure, role-based access control.
- Designed a hotel management module allowing owners to efficiently add, edit, and delete their listings through a responsive web interface.

Crypto Investment Advisor | *React, HTML, CSS, JavaScript, Python*

🐙 GitHub

- Built a data-driven web application that displays cryptocurrency prices and generates investment plans based on salary, risk tolerance, and duration.
- Implemented an LSTM-based machine learning algorithm in the backend to predict future cryptocurrency values and estimate investment returns.
- Designed an intuitive React interface delivering algorithm-driven investment suggestions and detailed insights into expected profits and coin allocation.

CERTIFICATIONS

- Data Structures and Algorithms with Java
